## Backend Developer, Fullstack Developer

Jakarta, Indonesia, +6287727552137, hanungrizqiwardianto@gmail.com

### PROFILE

I am Back-end Developer. SUPER Back-end Developer

While my professional journey spans about 4 years, I've been fortunate to learn every second, every hour, every day from leaders with 10+ years of experience. This has accelerated my growth, allowing me to bring the mindset, skills, and insight of someone with over a decade in the field.

I can work as a Full-stack Developer, handle data mining, and I'm familiar with ETL processes and IT architecture. I'm a fast learner, deeply passionate about microservices and solving complex programming challenges.

I'm seeking an exciting career where I can leverage my skills in IT programming, databases, big data, and delivering high-quality solutions even under pressure — because I love my work, my craft, and my vision.

I'm committed to consistently leveling up my skills every moment, every day, and in every opportunity. In my first year as a developer alone, I completed 10+ projects, proving my dedication to growth, excellence, and integrity

### EMPLOYMENT HISTORY

Oct 2025 — Present	<b>Software Engineer, PT Pamapersada Nusantara (UT Group)</b>	Jakarta
As a Software Engineer at PT Pamapersada Nusantara, I am responsible for designing, developing, and maintaining enterprise-level software systems that support the company's business operations across mining, logistics, and asset management. My work involves collaborating with cross-functional teams to translate complex business requirements into scalable and efficient technical solutions.		
<ol style="list-style-type: none"><li>1. System Development: Building and optimizing backend services, APIs, and databases using modern frameworks and technologies to ensure high performance and reliability.</li><li>2. Application Integration: Developing and maintaining integrations between internal systems and external platforms to streamline business workflows.</li><li>3. Code Quality &amp; Optimization: Implementing clean architecture principles, code reviews, and performance tuning for better maintainability and system efficiency.</li><li>4. Problem Solving: Analyzing issues, debugging system errors, and ensuring stable application performance in production environments</li><li>5. Innovation &amp; Continuous Improvement: Exploring new technologies and methodologies to improve development productivity and software quality.</li></ol>

<ol style="list-style-type: none"><li>1. .Net Backend Developer</li><li>2. Microservices</li><li>3. .Net 8, Net Core, Entity Framework Core</li><li>4. Microsoft Azure ServiceBus Messages Transaction</li><li>5. Development, Enhance, Bug fixing</li></ol>		
Project : <b>Astra FMS (Astra Fleet Management System)</b> – .NET Backend Developer		
AstrFMS 2.0 is a comprehensive solution designed to manage and streamline various aspects of fleet management systems. <b>Microservices Backend.</b> Each microservice is designed to handle specific functionalities and communicate with each other to provide a seamless experience. SQL Scripts includes SQL scripts for database management: Table, Index, RI & FK creation: Scripts to create tables, indexes, referential integrity, and foreign keys. Entity creation: Scripts to create database entities.		

Oct 2022 — Oct 2024	<b>Fullstack Developer, PT Kalimantan Prima Persada (PAMA Group)</b>	Jakarta
<ol style="list-style-type: none"><li>1. .NET Web Application (.Net Framework)</li><li>2. Microservices &amp; Monolythic</li><li>3. Backend - Rest API/RESTful API (C#) Frontend - JavaScript, NextJs</li><li>4. ETL - Pentaho Data Integration (Community &amp; Server Enterprise Edition)</li><li>5. Maintenance (Bug Fixing) &amp; Performing System</li><li>6. Console App (C#)</li><li>7. Oracle Database</li><li>8. Ms SQL Server - SQL Server Database (SSMS)</li><li>9. Ms SQL Server - SQL Report Builder (SSRS)</li><li>10. Power BI</li><li>11. Github/GitLab Azure DevOps</li><li>12. UiPath Robotic Process Automation</li><li>13. Requirement Analyst</li><li>14. SSIS (SQL Server Integration Service)</li></ol>		

## 15. PLSQL (Procedural Language SQL)

Project :

**BCS (Backlog Control System)** – Fullstack Developer

BCS is a **monolithic** web application. It covers development, maintenance, and bug fixes. NET is used for backend development and NET MVC for frontend development.

**DCFC (Digital Check Fatigue Chamber)** – Fullstack Developer

**Monolithic** app on scope development, maintenance, bugfix.

**DCAM (Digital Camera)** – Fullstack Developer

**Semi microservices** app using confluent kafka as message broker and mongodb, sql server, vertica. and others monolithic web app.

Sep 2021 — Nov 2021

Backend Developer Intern, Dinas Tenaga Kerja Kota Semarang,  
Kota Semarang

Semarang

1. Develop and Performing Web Disnaker
2. Backend Development
3. Maintenance App

---

### EDUCATION

Sep 2018 — Aug 2022

Bachelor Degree, Dian Nuswantoro University

Semarang

---

### SKILLS

Backend Development	Expert	Oracle Databases	Expert
Maintenance	Expert	ETL - Pentaho Data Integration	Expert
.NET Framework	Expert	Restful APIs	Expert
C Sharp (Programming Language)	Expert	SQL Server Management Studio (SSMS)	Expert
Console Applications	Expert	SQL Server Reporting Services	Expert
Github/GitLab	Expert	Power BI	Expert
Microsoft SQL Server	Expert	UiPath RPA	Expert

---

### LANGUAGES

English

Highly proficient
